Introducing the 42 Apex™ Wood Burning Fireplace

Joining FireplaceX's dynamic lineup of wood burning fireplaces is the new EPA-Certified 42 Apex™!

We invite you to relax and experience the deep, comforting warmth of the new 42 Apex™ by FireplaceX®. Nothing compares to the heat of a crackling wood fire, and the 42 Apex™ is designed to deliver high performance, clean-burning heat, while showcasing a spectacular fire view. A large rectangular door and viewing area beautifully frames and complements the fire, offering a sleek design that accommodates all styles, from contemporary to traditional.

Designed to be flexible for all installation applications, the 42 Apex™ is perfect for remodels and new home construction, as its simple installation parameters allow it to be featured anywhere in the home, including interior walls!

Some unique features you're going to love:

- Massive 328 square inch fire viewing area
- Sleek rectangular door design – classically understated, linear and very popular
- Easy to use single air control, artfully hidden in the face design
- Bypass damper for easy startup fires and smoke-free reloading
- Low profile door handle is incorporated into the sleek rectangular door design
- Perforated air wash for super clean glass
- Holds logs up to 24 inches long
- Unibody construction and heavy gauge steel firebox lined with kiln dried firebrick
- Up to 2,500 square foot heating capacity with up to 12 hour burn times
- Exceptionally quiet 400 CFM fan that minimizes noise while maximizing heat output
- Multiple chimney options: 8" Air Cooled Chimney or 7" Class A Chimney
- State of the art catalytic operation provides you with one of the cleanest burning zero clearance wood fireplaces in the industry – only 0.69 Grams/Hr!

The 42 Apex™ also features the industry's first in-wall control that combines digital catalytic temperature readout and a slide rheostat for the standard fan. This user-friendly device houses all of your fireplace's controls into one simple design that does not require batteries and can be easily mounted and seamlessly integrated into the wall. With this wall control you have the ability to adjust the fan speed for the amount of heat being distributed into the room, understand when your fireplace is operating at proper temperatures and performing at optimum efficiency, and even start your fire with the push of a button with our GreenStart™ feature! – That's right, the 42 Apex™ is the world's first wood fireplace to feature GreenStart™ push button ignition!
