Introducing the Evergreen™ Wood Stove by Lopi

The new mid-sized Evergreen™ wood stove by Lopi hits the mark on performance, function and design. This sleek stove features gentle curved lines and complements any home's décor while artfully presenting heavy gauge steel unibody construction and a cast iron door with a large, self-cleaning ceramic glass viewing area.

The Evergreen™ is available in your choice of a Leg or Pedestal Model. Both models come standard with a large capacity ash pan that allows for quick and easy ash removal simply by sweeping ash from inside the stove through the access ports and down into the pan.

This medium stove heats like it's a large stove, providing warmth up to 2,000 square feet with burn times of 8-10 hours long. It features the option of adding a whisper-quiet 400 CFM fan in order to quickly distribute even more of the Evergreen's radiant heat throughout your home. Its 2.2 cubic foot firebox is deeper and wider than most other wood stoves its size, allowing it to hold taller wood loads and logs up to 20.5 inches long.

The Evergreen™ is a clean-burning secondary combustion stove that has been tested and approved to the 2015 EPA standards with 3.4 grams of emissions per hour and a True Efficiency of 74.5%. Secondary combustion occurs at the top of the firebox where smoke, creosote and gases are re-burned, which reduces environmental pollution while creating a dramatic presentation of fire. The result is an increase in the Evergreen's efficiency and heat output, allowing for cleaner, hotter fires that use less wood and save you money!

The Evergreen's standard easy-to-use bypass damper gives you full control over the flow of smoke inside this stove, eliminating smoky startups and reloads. The burn rate, from a gentle overnight burn to a large rolling fire, can be effortlessly managed by a single air control located under the stove's door. Combine that heat output with the cooktop surface to warm up a bowl of soup during a power outage.

The Evergreen™ also features the revolutionary GreenStart™ Igniter option which allows you to start this stove simply with the push of a button! Starting your wood stove or refreshing old fires has never been easier than with GreenStart™.
